

## GRP Permadec Cantilever Panels

### Versatile Mounting Options

Our Cantilever Panels can effortlessly sit on either a pre-cast beam or a steel beam, offering you flexibility in your structural design.

### Integrated Edge Protection

Experience enhanced safety with our panels that provide a socket for Edge Protection systems. Customize your edge protection to meet your specific project requirements for maximum safety and compliance.

### Tailored for Your Needs

Our Cantilever Panels are not one-size-fits-all. They are fully bespoke to suit each structure. This can mean from changing the rib centres to suit reinforcement / height of the overall rib for cover to skewing the panel to suit the structure.

### Cost-Efficient Solution

The use of our specially designed Cantilever Panels can lead to significant cost savings by eliminating the need for additional propping on the side of a bridge or concrete deck structure.
